FCCID: Z8H89FT0005 Class II Permissive Change Letter

Cambium Networks is requesting a Class 2 permissive change to add additional 30dBi Dish or 23dBi Patch Panel antenna types for Point to point mode.

For point to point operation with a Dish or Panel we request to use the point to point exclusion for the DTS band under 15.247 (c)(1)iii.

Note: This is a composite radio operating under two rule parts 15.247 and 15.407 there are multiple channel bandwidths, this is a software defined radio, which is US region locked and cannot be changed. Additionally there is no change to the software distribution and security as previously filed.

Sincerely,

Steven M. Payne
R.F. Principle Staff Engineer
